Preface	v
1 What Is Combinatorics?	1
1.1 Example: Perfect Covers of Chessboards	3
1.2 Example: Magic Squares	7
1.3 Example: The Four-Color Problem	10
1.4 Example: The Problem of the 36 Officers	11
1.5 Example: Shortest-Route Problem	14
1.6 Example: Mutually Overlapping Circles	15
1.7 Example: The Game of Nim	17
1.8 Exercises	20
2 Permutations and Combinations	27
2.1 Four Basic Counting Principles	27
2.2 Permutations of Sets	35
2.3 Combinations (Subsets) of Sets	41
2.4 Permutations of Multisets	46
2.5 Combinations of Multisets	52
2.6 Finite Probability	56
2.7 Exercises	60
3 The Pigeonhole Principle	69
3.1 Pigeonhole Principle: Simple Form	69
3.2 Pigeonhole Principle: Strong Form	73
3.3 A Theorem of Ramsey	77
3.4 Exercises	82
4 Generating Permutations and Combinations	87
4.1 Generating Permutations	87
4.2 Inversions in Permutations	93
4.3 Generating Combinations	98

x Contents

4.4	Generating r -Subsets	109
4.5	Partial Orders and Equivalence Relations	113
4.6	Exercises	118
5	The Binomial Coefficients	127
5.1	Pascal's Triangle	127
5.2	The Binomial Theorem	130
5.3	Unimodality of Binomial Coefficients	139
5.4	The Multinomial Theorem	143
5.5	Newton's Binomial Theorem	146
5.6	More on Partially Ordered Sets	149
5.7	Exercises	154
6	The Inclusion–Exclusion Principle and Applications	161
6.1	The Inclusion–Exclusion Principle	161
6.2	Combinations with Repetition	168
6.3	Derangements	172
6.4	Permutations with Forbidden Positions	177
6.5	Another Forbidden Position Problem	181
6.6	Möbius Inversion	183
6.7	Exercises	198
7	Recurrence Relations and Generating Functions	205
7.1	Some Number Sequences	206
7.2	Generating Functions	215
7.3	Exponential Generating Functions	222
7.4	Solving Linear Homogeneous Recurrence Relations	228
7.5	Nonhomogeneous Recurrence Relations	245
7.6	A Geometry Example	253
7.7	Exercises	257
8	Special Counting Sequences	265
8.1	Catalan Numbers	265
8.2	Difference Sequences and Stirling Numbers	274
8.3	Partition Numbers	291
8.4	A Geometric Problem	298
8.5	Lattice Paths and Schröder Numbers	301
8.6	Exercises	315

9	Systems of Distinct Representatives	321
9.1	General Problem Formulation	322
9.2	Existence of SDRs	326
9.3	Stable Marriages	330
9.4	Exercises	337
10	Combinatorial Designs	341
10.1	Modular Arithmetic	341
10.2	Block Designs	353
10.3	Steiner Triple Systems	362
10.4	Latin Squares	368
10.5	Exercises	388
11	Introduction to Graph Theory	395
11.1	Basic Properties	396
11.2	Eulerian Trails	406
11.3	Hamilton Paths and Cycles	414
11.4	Bipartite Multigraphs	419
11.5	Trees	426
11.6	The Shannon Switching Game	432
11.7	More on Trees	438
11.8	Exercises	449
12	More on Graph Theory	461
12.1	Chromatic Number	462
12.2	Plane and Planar Graphs	472
12.3	A Five-Color Theorem	476
12.4	Independence Number and Clique Number	480
12.5	Matching Number	488
12.6	Connectivity	493
12.7	Exercises	498
13	Digraphs and Networks	505
13.1	Digraphs	505
13.2	Networks	516
13.3	Matchings in Bipartite Graphs Revisited	523
13.4	Exercises	533

xii Contents

14 Pólya Counting	541
14.1 Permutation and Symmetry Groups	542
14.2 Burnside's Theorem	552
14.3 Pólya's Counting Formula	559
14.4 Exercises	576
Answers and Hints to Exercises	582
Bibliography	596
Index	598
